WARDROBE MEASURING GUIDE

With a few simple measurements you can design your wardrobe and help us deliver everything you need to save money and have the DIY Wardrobe you want.

Take the following measurements and forward this with your order form. Note if you simply want one of the standard measurements there is no need to complete this form.

Measure the total width of the wall 1. in three places. i.e.. At floor level, at ceiling level, and mid level.

The three measurements will all be slightly different.

Measure from floor to ceiling in three different places, i.e. in each corner and then the middle of the wall.

Note the three measurements will all be slightly different.

Note we will be using ... the smallest measurement of the three when we make your wardrobe.

You will also need to let us know if your floor and walls are level. This is simple and requires a spirit level placed on the floor and walls to see how many (if any) millimetres they run out. If you only have a small spirit level use something straight to obtain the levels over the area you wish to install the wardrobe. You simply measure with your tape or other object the gap between the floor and/or the wall and the spirit level. Write this on your measuring guide.

See examples for how to complete this form and fax or email it with your order.
